**26 August 2022**

### **New summer all-time peak record was set in the Russian UPS in August**

*New summer all-time peak demand record of 126,655 MW was set on August 24 at 2:00 p.m. (Moscow time) in Russian UPS, 515 MW higher than the previous summer peak demand record set on July 19, 2021, as SO UPS reported.*

In general, during the period of extremely high temperatures (in July–August) 2022, 19 Interconnected and Regional Power Systems (IPS, RPS) passed the maximum peak demand, including the IPS of Urals, the IPS of Siberia and the IPS of East.

In the period of peak demand IPS and RPS have demonstrated reliable operation. To prepare for summer peak loads in 2022 SO UPS has calculated the predicted value of the maximum peak load in the IPS and RPS in less favorable temperature conditions. According to the forecasts and in response to the SO UPS orders capacity reserve of generating units was selected to meet summer peak demand and maintain reliability.

ENDS.
