New all-time summer peak record was set in the Russian UPS in July

New all-time summer peak demand record of 137,224 MW was set in the Russian UPS on July 5 at 2:00 p.m. (Moscow time) with an average daily air temperature 23,6 °C. This is 3,125 MW higher than the previous summer record set on August 7, 2023, SO UPS reports.

In the period of summer peak demand due to the extremely high temperatures the Russian UPS has demonstrated reliable operation.

ENDS.
