

## KPX Opens Jungbu Regional Headquarter in Osong, Chungcheongbuk-do

### **Active-active control framework established to strengthen disaster response and power system stability**

The Korea Power Exchange (KPX), led by Chairman and CEO Kim Sungjin, held an opening ceremony on 15 June 2026 for its **Jungbu Regional Headquarter** in **Osong, Chungcheongbuk-do**.

The opening marked the establishment of a mainland redundant power control center and the launch of next-generation Energy Management System (EMS) and Market Management System (MMS) operations. The project was undertaken to ensure uninterrupted operation of the power system and electricity market even in times of disaster or emergency.

The Jungbu Regional Headquarter houses a redundant power control center and electricity market system, operating in an active-active framework with the Central Power Control Center. In particular, it is designed to enable independent power system operation even in emergency situations through enhanced generation and renewable energy control functions.

KPX also plans to strengthen the operation and output control of non-centrally dispatched generators and expand integrated control capabilities based on weather and demand forecasting in response to growing renewable energy integration.

The ceremony was attended by representatives from the National Assembly, the government, local authorities, KEPCO, related institutions, the power industry, and the local community.

In his commemorative remarks, Kim said, "The Jungbu Regional Headquarter is a key infrastructure asset for ensuring the stability and continuity of the national power system. Based on the dual control framework between the central and Jungbu control centers, we will do our utmost to maintain stable system operations and support greater renewable energy integration."

Congratulatory remarks were also delivered by Lee Hohyeon, Vice Minister of the Ministry of Climate, Energy and Environment, and Kim Dong-cheol, President and CEO of KEPCO. National Assembly Member Lee Yeon-hee also shared a video message to celebrate the opening.
